

WATERCARE

WHAT TO DO IF YOU HAVE NOT USED YOUR CTU FOR OVER 4 WEEKS

Important hygiene advice

- WaterCare Calcium Treatment Units (CTUs) such as Prima and Vapour are designed to be installed on professional coffee machines and combination steam ovens to be used on a daily basis.
- WaterCare recommends that the filter system not be decommissioned for a long period and that filter cartridges are replaced at a minimum of every 12 months.
- There may be a need for the professional coffee machine or combination steam oven to be turned off and will not be used for several weeks. When the equipment needs to be turned on and used again, WaterCare advises the following procedure should be followed for the CTU water filters; (The coffee machine or combination steam oven manufacturer may advise a separate process which should also be followed).
- The CTUs needs to be flushed by disconnecting the outlet hose and flush 5x times the volume of resin into a drainage bucket according to the guidelines below. Once this is complete, the CTU is ready to be used again.

Unit	Litres
CTU5	25
CTU10	50
CTU18	90
CTU23	115
CTU30	150

If you need any help flushing your CTU, please call us on **01279 780250** (opt. 2) or email: service@watercare.co.uk.
